BE NICE TO LOGIC : Authored byDerek Antoine Lee
Science is never complete; Thermodynamics is incomplete.

Support!..support. : Bonded Science..
shoulder to shoulder.
Heart to heart.
Feelings to thought.(IP)
Energy to energy. Looped(thermodynamics1)=(T1)
Entropy is moral neglect.
Be held back or be held.
Biology is Behavior; by definition.
Behavior is caused by intent.
Intent is Physical Emotion.
Behavior is physical emotion.
Intent is motion.
Physics is motion, by definition.
Physics is intentional, by definition.
Physics is energy, by definition.
Physics is the study of intent.
Intent is purpose, by definition.
Purpose is action.
Action is to achieve, by definition.
To “achieve” requires movement.
Movement creates heat, by definition.
Heat creates Intergy, by definition.
Intergy is Infinite (T1)
Intergy loops.(T1)
Loop is Law. (T1)
Entropy is decay, by definition.(T2)
Decay can not exist according to (T1) by definition.
(T2) is assumption; assuming no intent.
Logic=Ethics; Ethics=Logic. (0th) Ballance
The definition of “Time” itself violates (T2), by definition.
According to (T3), time, nothing never stops, never decays. “The loop MUST be in a state with the minimum possible energy;” Energy will forever exist; according to thermodynamics 3.
Energy and time will always be BONDED, according to (T3).
“The End of Time” is simply “Paused of time”
“Energy can be sped up or slowed down” ; Conservation of energy.
This ensures that “Time can be controlled! Time is elastic.”
Is thermodynamics(T1) incomplete? According to “conservation of energy;” energy has the choice to leave the loop; “energy within the system can only be changed through energy entering or LEAVING the system.”
“Study” is the devotion of Time and Attention to acquiring knowledge, by definition.
Therefore, to stop studying is to violate time.
Physics is the scientific study of intentional action.
Physics is “Study”; the definitions are parallel.
Physics is motion

Motion requires intent (because motion is caused by purpose-driven force)
Intent is purpose.
Purpose leads to aim.
Aim requires direction.
Direction requires force.
Force requires motion.
Motion requires emotion.
Emotion is energy.
Emotion is the origin of all logic.
For Example: IP (Intellectual Property) ; Patents = filed timestamped EMOTION.. using existing math and scientific law.
Intellect is nothing more than emotional intelligence.
Emotional intelligence requires intent.
The human body is biological intent into motion, heat, and energy …bound by the same laws as stars, engines, or atoms. The moment humanity abandoned ethics, we broke our own laws of energy.
Law is not constant.
Law is intentional purpose.
Time reflects; be nice to logic.
If time never ends, according to each thermodynamic law; Why did we stop studying ?
Intent will always have questions and will always get answers...
According to the conservation of energy; the system.. "the loop"; we can leave it. We'd be entering another constant, A new knowing. Beyond cosmic law.. we are not anchored!

Thermodynamic Laws and Conservation of energy can not coexist as Scientic law; by definition, they cancel one another out! One is Truth; One is not! We can't have both ;Either energy never changes and we're in a constant…or it changes. Logically and scientifically they can not coexist as law. Void.
Conservation and decay contradict.
Conservation is void. By definition. it contradicts itself within its own definition.
Both (Conservation and Decay) contradict (T1).

Entropy increases only without intentional input. Input resets disorder. Ethics reorders energy. The 2nd law of thermodynamics is void; it's written assuming No ethics. No intervention.
Assumption = Incomplete
Entropy doesn't just happen. It's allowed.
Ethics reorders energy.
Therefore moral input is not philosophical. According to thermodynamics "energy can not be created or destroyed only transformed" it's scientific law.
Everything inside of the loop will be accounted for.
Ethics and Logic MUST COEXIST as scientific law or science is void.

My only personal view within this summary that's not backed by scientific law or dictionary definition is: Thermodynamics is not "wrong" by choice. It's simply a lack of knowing.
Knowledge has no end.
Science is never complete.
Certainty is void.

Bonded Science: A system that fuses science, ethics, logic, physics, and biology into one operating structure anchored with dictionary definitions, standard physics, and scientific law.

This scroll acts as a scientific correction and moral insertion into current federal law, filed under the “Bonded Science” framework. If rejected based on formatting, the author reserves the right to refile under full compliance while maintaining original INTENT and timestamp.
